

GENERAL INFORMATION ABOUT THE INTERMOUNTAIN JOURNAL OF SCIENCES:

The Intermountain Journal of Sciences (IJS) offers a regional peer-reviewed outlet for scientists, educators and students to submit original research, management applications, or viewpoints concerning the sciences. We welcome original manuscripts dealing with Biological Sciences (Botany, Aquatic & Terrestrial), Environmental Sciences & Engineering, Health & Human Development, Humanities & Social Sciences, Mathematics, Statistics & Computer Science, Molecular Cellular Biology & Neurosciences, Pharmacology & Toxicology and Physical Sciences. It is co-sponsored by The Montana Academy of Sciences, The Montana Chapters of The American Fisheries Society and The Wildlife Society.

Abstracts from presentations at annual meetings of the co-sponsoring organizations appear in the last issue of each printed volume if submitted by the sponsoring organization(s) for any given year. This has provided a permanent record in a professional and consistent format of their annual meeting proceedings that is not only available to individual subscribers and libraries but is in the process of becoming available on line to anyone in the world. The on line digital repository is administered by Montana State University's Open Journal Systems accessed through IJS's Website.

Twenty-three volumes (47 issues) of IJS have been printed since 1995 that included 177 published articles from among 185 manuscripts submitted through the end of 2017. An additional 27 articles were published in three special thematic issues in which individual manuscripts were solicited. The 24th volume for 2018 is in the process of being published. All volumes of IJS continue to be unarchived, digitized and made available on-line as they are completed starting with the most recent volume.

Date: January 2019
